Cleaning agent with carnauba wax
In addition to superb cleaning qualities, it leaves a thin layer of natural carnauba wax on the surface of the serviced area. This makes it much easier to remove dirt from the surface of the bath.

Disinfectant for the bath’s massage systems
This removes any precipitation that has gathered while using the massage systems and disinfects the inner surface of the massage system.

Scale remover
Removes mineral precipitation (such as incrust) from the surface of the bath and from the massage systems.

Cleaning properties
Odourless
Limited foaming during the process
Removes mineral as well as biological dirt

EXCELLENT CLEANING PROPERTIES
LEAVES A NATURAL WAX PROTECTION LAYER ON THE BATH

EUR 13.- / 1000 ml

It is forbidden to change or copy the content of the catalogue.
SAFETY
Aquator OÜ’s highest priority is the safety of the users of our baths. With this in mind:
· Without exception, all our baths undergo complex testing following certified procedures (partner Intertek ETL Semko and a notified body L034).
· Baths with electronic switching are installed with water level sensors, which avoid hydro massage pumps being turned on when the bath is empty or the water level is insufficient.
· A safety valve is installed in the water inlet of hydro massage pumps.
· The baths are equipped with grounded equipotential bonding.

CERTIFICATES
Aquator OÜ’s product reliability is guaranteed in cooperation with Intertek ETL Semko and a notified body L034 belonging to the world’s leading certification and testing organisations.
· Aquator OÜ products hold a European CE compliance certificate (testing partner Intertek ETL Semko and a notified body L034).
· Aquator OÜ holds an Intertek ETL Semko compliance certificate for its manufacturing process.

WARRANTY
Aquator OÜ products come with the following warranty:
· Bath body five years.
· Bath appliances two years.

Established in 1996, Aquator OÜ currently operates in 10 countries.

Our objective is to offer innovative products of the highest design quality to our customers, with functionality and ergonomics based on our knowledge and experience in the development, production and use of medical therapy baths.

Aquator’s design efforts were recognised with the DME Award 2007 (Design Management Europe Award 2007), which is presented by the Essen Design centre to companies that have shown remarkable results in implementing design to achieve their objectives.

Since Aquator was founded, we have grown to become the leading developer and manufacturer of medical therapy baths in the Baltic countries, in close cooperation with the people who keep alive the 130-year-long spa culture in our homeland.

BENEFITS AND POSSIBILITIES

- POWERFUL
- ERGONOMIC (COMFORTABLE BODY POSITION)
- THERAPEUTIC MASSAGE
- SPINE PROTECTION
- FOOT ACUPRESSURE MASSAGE (ACCESSORY)
- SIMPLE CONTROL (WITH TOUCH SCREEN, ELECTRONIC OR PNEUMATIC)
- ECONOMIC (WORKS WITH ½ WATER QUANTITY)
- DESIGN EXCELLENCE (DESIGN MANAGEMENT EUROPE AWARD)
- MATERIALS AND COMPONENTS OF THE BEST EUROPEAN QUALITY ONLY
- DEVELOPED AND MANUFACTURED IN ESTONIA

Design by Aquator 2007

Economical (works with ½ water quantity)

Powerful

Ergonomic (comfortable body position)

Therapeutic massage

Spine protection

Foot acupressure massage (accessory)

Simple control (with touch screen, electronic or pneumatic)

Economic

Design excellence (Design Management Europe Award)

Materials and components of the best European quality only

Developed and manufactured in Estonia

Due to printing technology, the displayed colours may differ from the actual ones.
The new and innovative control system AQUATOR Touch-Screen (TS) makes using the massage bath more comprehensive, accurate and responsive.

All the appliances can be switched on and off, regulated and monitored from a one touch-sensitive screen. There are no misleading submenus. The STOP button, which turns off all activated functions, is the biggest one at the bottom. The aim of this button is to avoid any hesitations in using such an innovative device. This button is also very convenient when finishing bathing, as all active functions can be switched off with one press of the button.

There is no text on the touch-screen; instead icons of different colours have been used. This fine nuance means that the control system can also be used without glasses – people who would not see the text can still distinguish the big coloured icons. Thanks to the touch-screen it was possible to remove all control buttons from the edge of the bathtub. The touch-screen control system can be used in all AQUATOR baths, irrespective of the equipment installed on the bath.

Electronic control systems from Koller (country of origin: Austria) have become the standard for massage bathtubs throughout Europe and worldwide.

Pneumatic switches from Koller (country of origin: Austria) are the easiest way to switch the massage systems of the bathtub on and off. Additionally, we offer mechanical switches to increase the hydro-massage power by directing air in the water jets and stepless adjustment of the strength of the back massage.
Accessories

- Foot acupressure massage EUR 239.00
- Hand rest EUR 90.00
- Gold-plated jets and accessories Extra cost for a massage system +30%

- Micro jets (standard equipment)
- Flat version of micro jets (chrome/white inner parts) Extra cost for a massage system +15%

- Midi jets (standard equipment)
- Flat version of midi jets (chrome/white inner parts) Extra cost for a massage system +15%

- Super jets (standard equipment)
- Flat version of super jets (chrome/white inner parts) Extra cost for a massage system +15%

- Air jets (standard equipment)
- Flat version of air jets (chrome/white inner parts) Extra cost for a massage system +15%

- Flat version of water jet aerators Extra cost for a massage system +15%

- Flat version of an electronic switch Extra cost for a massage system +15%

- Flat version of the back massage mechanical switch Extra cost for a massage system +15%

- Flat version of a pneumatic switch Extra cost for a massage system +15%
Accessories

- **Headrest “Mare” (white)**
  - Price: EUR 93.00

- **Headrest “Neptun” (white)**
  - Price: EUR 33.00

- **Headrest “Isola” (black)**
  - Price: EUR 25.00

- **Mixer Damixa “Jupiter” with spout**
  - Price: EUR 704.00

- **Mixer Damixa “Merkur” without spout**
  - Price: EUR 592.00

- **Mixer Bugnatese “Kobuk” without spout**
  - Price: EUR 518.00

- **Mixer “Neptun” without spout**
  - Price: EUR 365.00

- **Thermostat mixer “Neptun” without spout**
  - Price: EUR 485.00

- **Bath filling via special overflow**
  - Price: EUR 49.00

- **Cascade spout “Neptun” (Ø 70 mm)**
  - Price: EUR 57.00

- **Mixer Damixa “Jupiter” with spout**
  - Price: EUR 704.00

- **Mixer “Neptun” without spout**
  - Price: EUR 365.00

- **Mixer Bugnatese “Kobuk” without spout**
  - Price: EUR 518.00

- **Colour-light therapy with STOP function**
  - Price: EUR 385.00

- **Underwater light**
  - Price: EUR 179.00

GENERAL

- Place the bath in its intended location.
- Adjust the bath to a horizontal position and the required height by adjusting the supportive legs. Then fasten the supportive legs with lock nuts.
- Connect the hot and cold water to the relevant tap inlets by using flexible pressure hoses. The size of the water system inlets is ½" and the pressure must be between 0,2–0,4 MPa (2–4 bar). HOT AND COLD WATER INLETS MUST BE PROVIDED WITH MUD FILTERS!
- Connect the drainage to the sanitation system.
- Install the front and side panel(s) and fasten with screws.
- When walling in the bath in the bathroom, leave a sufficiently big panel, hatch or door that is openable with a tool (a screwdriver for example) for installing the bath and maintaining the devices, and the possibility for lifting out the bath. Under the bath, a trap is installed to which the drain is connected. The exact location of the trap should be determined on the basis of installation preconditions in regard to the location of the sanitation opening. When walling in, (a) ventilation opening(s) should be left in the wall for ensuring pump and/or blower cooling.
- Before walling in the bath, all debris and dust have to be removed from the space under the bath.

ELECTRICAL CONNECTION

- All electrical works should be carried out by qualified (licenced) electricians or the installation technicians authorised by the manufacturer.
- The baths are intended to be connected to a public power supply with a neutral conductor and a protective conductor.
- The baths belong to the surge protection class II.
- Grounding the conducting metal housings of electrical devices of a bath is mandatory! To do this, the housings are connected through protective earth conductors to the main earthing bar of the electric installation.
- When connecting, local requirements should be observed. As well as permitted load to one phase!
- It is obligatory to implement local earthed auxiliary equipotential bonding. For this, the frame of the bath that fulfils the task of an equipotential bonding bar and is connected to a protective conductor, should be connected to all auxiliary conducting parts in the same room at the place indicated with a sign shown here:
  1. water, gas, sanitation and other pipes made from metal or containing metal parts;
  2. heating and air conditioning pipes made from metal;
  3. metal structures of the building;
  4. metal protection net of electric underfloor heating;
  5. protective conductors of sockets in the same room;
  6. other auxiliary metal parts that could have an electric potential.
- When installing the bath mixer, connect the mixer to the bath frame by using a lead with a minimum cross section of 4 mm².
- The power cord is connected to the bath though the bushing of the plastic box with marking.
- Make sure that the bushing and the box are water tight!
- The bathtub is stationarily connected to the power network accordingly to Figure 1, 2 or 3.
